

IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application. An identifier indicating the status of each claim is provided.

Listing of Claims

1. (Currently Amended) A video game system comprising a service provider and a video game device connected through a network, wherein

said video game device comprises video game ~~soft~~software program read-out means for reading out a video game ~~soft~~software program from a video game program recording medium; [[,]]

client registration control means for ~~getting~~obtaining access to said service provider through said network and performing client registration of said video game ~~soft~~software program; [[,]]

control means for controlling of progressing a video game in accordance with a video ~~soft~~software program read out by said video game ~~soft~~software program read-out means, ~~getting~~obtaining access to said service provider through said network when the game stage of said video game is cleared, and obtaining privilege information corresponding to the cleared game stage from said service provider; and [[,]]

~~aid~~ printing control means for converting the privilege information obtained from said service provider into printing data, and outputting the printing data; and

said service provider comprises:

database administration means for administrating privilege data-based database in which privilege information corresponding to a game stage of a video game and client data based database in which client information of said video game is registered, and

distribution control means for controlling of ~~accepting~~ access based on said client information from the video game device connected through said network, taking out privilege information corresponding to the cleared game stage by said database administration means, and distributing said privilege information,

wherein advertisement information and electronic coupons are is-registered by said data-based database administration means, and said advertisement information and electronic coupons are is added to said privilege information and distributed by said distribution control means.

2. (Original) The video game system according to claim 1, wherein said service provider distributes said privilege information by adding thereto a printing control program capable of printing said privilege information thereto by said distribution control means.

3. (Canceled)

4. (Original) The video game system according to claim 1, wherein said service provider distributes said privilege information by adding identification information thereto by said distribution control means.

5. (Original) The video game system according to claim 4, further comprising validity determination means for notifying determination of validity of said privilege information on the basis of said identification information through said network on the basis of identification information added to said privilege information when privilege based on said privilege information is exercised.

6. (Currently Amended) A video game system, comprising:
a video game program recording medium having a video game ~~soft~~software program recorded therein comprising a video game ~~soft~~software program body, privilege information corresponding to a game stage of a video game progressed in accordance with a video game ~~soft~~software program, and a printing control program capable of printing privilege information corresponding to a cleared game stage when the game stage is cleared;

a video game device comprising video game ~~soft~~software program read-out means for reading out said video game ~~soft~~software program from the recording medium, and control means for progressing a video game in accordance with the video game ~~soft~~software program read out by the video game ~~soft~~software program read-out means, and converting privilege information corresponding to the cleared game stage in accordance with said printing control program into printing data, and outputting the printing data when the game stage of said video game is cleared,

wherein advertisement information and electronic coupons are is registered by a ~~data-based~~database administration means, and said advertisement information and electronic coupons are added to said privilege information and distributed by a distribution control means;

and

a printer device for printing said printing data output from said video game device.

7. (Currently Amended) A video game system comprising a service provider and a video game device connected through a network, wherein

said video game device comprises video game ~~soft~~software program read-out means for reading out the video game ~~soft~~software program from a video game program recording medium having a video game ~~soft~~software program that can be read and executed by a computer including a video game ~~soft~~software program body, and identification information for ~~getting~~obtaining access, when a game stage of a video game progressed in accordance with a video game ~~soft~~software program is cleared, to a service provider to obtain privilege information corresponding to the cleared game stage, and printing the privilege information, control means for controlling of progressing a video game in accordance with a video game ~~soft~~software program read out by the video game ~~soft~~software program read-out means, and ~~getting~~obtaining access to a service provider on the basis of the identification information to obtain privilege information corresponding to the cleared game stage, when the game stage of the video game is cleared, and printing control means for converting the privilege information obtained from the service provider into printing data, and outputting the printing data; and

said service provider comprises ~~data-based~~database administration means for administrating ~~data-based~~database including privilege information corresponding to a game stage of a video game, and distribution control means for controlling of accepting access based on said identification information from the video game device connected through a network and taking

out privilege information corresponding to the cleared game stage by said ~~data-based~~database administration means to distribute said privilege information,

wherein advertisement information and electronic coupons areis registered by said ~~data-based~~database administration means, and said advertisement information and electronic coupons areis added to said privilege information and distributed by said distribution control means.

8. (Currently Amended) A service provider system, comprising:

~~data-based~~database administration means for administrating privilege ~~data~~baseddatabase in which privilege information corresponding to a game stage of a video game is registered and client ~~data-based~~database in which client information of the video game is registered; and

distribution control means for controlling of accepting access based on said client information from a video game device connected through said network and taking out privilege information corresponding to the cleared game stage by said ~~data-based~~database administration means to distribute said privilege information,

wherein advertisement information and electronic coupons areis registered by said ~~data-based~~database administration means, and said advertisement information and electronic coupons areis added to said privilege information and distributed by said distribution control means.

9. (Original) The service provider system according to claim 8, wherein said

distribution control means distributes said privilege information by adding thereto a printing

control program capable of printing said privilege information.

10. (Canceled)

11. (Original) The service provider system according to claim 8, wherein said privilege information is distributed with identification information added thereto by said distribution control means.

12. (Original) The service provider system according to claim 11, further comprising validity determination means for notifying determination of validity of said privilege information on the basis of said identification information through said network on the basis of identification information added to said privilege information when privilege based on said privilege information is exercised.

13. (Currently Amended) A service provider system, comprising:
data-based database administration means for administrating data-based database
including privilege information corresponding to a game stage of a video game; and
distribution control means for controlling of accepting access based on
identification information from a video game device connected through a network, taking out
privilege information corresponding to a cleared game stage in said video game device by said
data-based database administration means, and distributing said privilege information,
wherein advertisement information and electronic coupons are registered by said
data-based database administration means, and said advertisement information and electronic

coupons are is added to said privilege information and distributed by said distribution control means.

14. (Original) The service provider system according to claim 13, wherein said distribution control means controls distributing process of a printing control program capable of printing said privilege information along with said privilege information.

15. (Currently Amended) A video game device, comprising:

video game ~~soft~~software program read-out means for reading out the video game ~~soft~~software program from a recording medium having a video game ~~soft~~software program recorded therein comprising a video game program body, privilege information corresponding to a game stage of a video game progressed in accordance with a video game ~~soft~~software program, and a printing control program capable of printing privilege information corresponding to the cleared game stage when the game stage is cleared; and

control means for progressing a video game in accordance with a video game ~~soft~~software program read out by said video game ~~soft~~software program read-out means and converting privilege information corresponding to the cleared game stage in accordance with said printing control program into printing data, and outputting the printing data when the game stage of said video game is cleared,

wherein advertisement information and electronic coupons areis registered by a ~~data-base~~database administration means, and said advertisement information and electronic coupons areis added to said privilege information and distributed by a distribution control means.

16. (Currently Amended) A video game device, comprising:

video game ~~soft~~software program read-out means for ~~getting~~obtaining access, when a game stage of a video game progressed in accordance with a video game ~~soft~~software program is cleared, to a service provider, and reading out said video game ~~soft~~software program from a video game program recording medium having a video game ~~soft~~software program that can be read and executed by a computer including a video game ~~soft~~software program body and identification information to obtain privilege information corresponding to a cleared game stage, and printing the privilege information;

control means for controlling of progressing a video game in accordance with the video game ~~soft~~software program read out by said video game ~~soft~~software program read-out means, and ~~getting~~obtaining access to a service provider on the basis of said identification information, when the game stage of said video game is cleared, to obtain privilege information corresponding to the cleared game stage from said service provider,

wherein advertisement information ~~and~~ electronic coupons areis registered by a ~~data-based~~database administration means, and said advertisement information ~~and~~ electronic coupons areis added to said privileged information and distributed by a distribution control means; and

printing control means for converting the privilege information obtained from said service provider into printing data, and outputting the printing data.

17. (Original) The video game device according to claim 16, wherein said

control means controls reading out individual identification information every game stage cleared from a video game program recording medium, and obtaining privilege information from

said service provider.

18. (Original) The video game device according to claim 16, wherein said control means controls producing individual new identification information every game stage cleared on the basis of identification information read out from a video game program recording medium, using the produced identification information to get access to a service provider, and obtaining privilege information corresponding to the cleared game stage from said service provider.

19. (Currently Amended) A control method for a video game device comprising:

reading out a video game software program from a video game program recording medium having a video game software program recorded comprising a video game software program, privilege information corresponding to a game stage of a video game progressed in accordance with a video game program, and a printing control program capable of printing privilege information corresponding to a cleared game stage when the game stage is cleared;

progressing a video game in accordance with the video game software program; and

converting privilege information corresponding to a cleared game stage in accordance with the printing control program, and printing the converted privilege information, when the game stage of the video game is cleared,

wherein a service provider administers advertisement data-based database in which advertisement information and electronic coupons are registered, and distributes said privileged information by adding advertisement information and electronic coupons thereto.

20. (Currently Amended) A printing control method in a video game system comprising a service provider and a video game device connected through a network, comprising the steps of:

reading out a video game software program from a video game program recording medium having a video game software program that can be read and executed by a computer including a video software program body and identification information for obtaining privilege information corresponding to a cleared game stage, and printing the privilege information by getting obtaining access to a service provider when a game stage of a video game progressed in accordance with a video game software program is cleared;

progressing a video game in accordance with said video game software program;

getting obtaining access to a service provider on the basis of the identification information to obtain privilege information corresponding to a cleared game stage from the service provider, when the game stage of the video game is cleared; and

converting the privilege information obtained from the service provider into printing data, and printing the printing data,

wherein said service provider administers advertisement data-based database in which advertisement information and electronic coupons are registered, and distributes said

privilege information by adding advertisement information and electronic coupons thereto.

21. (Original) The printing control method in a video game system according to claim 20, wherein a printing control program capable of printing said privilege information is read out from the recording medium, and privilege information obtained from said service provider is converted into printing data in accordance with said printing control program, and printed.

22. (Original) The printing control method in a video game system according to claim 20, wherein a printing control program capable of printing said privilege information is obtained from said service provider, and privilege information obtained from said service provider is converted into printing data in accordance with said printing control program, and printed.

23. (Currently Amended) A video game program recording medium recording a video game software program that can be read and executed by a computer comprising:

a video game software program body;

privilege information corresponding to a game stage of a video game progressed in accordance with a video game software program,

wherein a service provider administers advertisement data-based database in which advertisement information and electronic coupons are registered, and distributes said privilege information by adding advertisement information and electronic coupons thereto; and

a printing control program for reading out and capable of printing privilege information corresponding to a cleared game stage when the game stage is cleared.

24. (Previously Presented) The recording medium according to claim 23, wherein said printing control program includes a printer driver.

25. (Currently Amended) A video game program recording medium recording a video game ~~soft~~software program that can be read and executed by a computer including:

a video game ~~soft~~software program body; and

identification information for obtaining and printing privilege information corresponding to a cleared game stage by ~~getting~~obtaining access to a service provider when a game stage of a video game progressed in accordance with a video game ~~soft~~software program is cleared,

wherein said service provider administers advertisement ~~data-based~~database in which advertisement information ~~and electronic coupons are~~is registered, and distributes said privilege information by adding advertisement information ~~and electronic coupons~~ thereto.

26. (Currently Amended) The recording medium according to claim 25, wherein the video game ~~soft~~software program includes individual identification information every game stage.

27. (Currently Amended) The recording medium according to claim 25,
wherein the video game ~~soft~~software program includes a printing control program capable of
printing said privilege information.
